

BitcoinChain Protocol Smart Payment and
NFT Marketplace on Binance Smart Chain

What Is BitcoinChain ?

BitcoinChain (BITCHAIN) is an high yield frictionless farming token that runs on BSC Scan. It automatically offers farming yield into your wallet without you needing to put your asset in a liquidity pool. BITCHAIN employs 3 simple functions which increases investors' value : Reflection + LP acquisition + Burn. In each trade, the transaction is taxed at 4% fee, 2% goes to holders and 2% goes to liquidity

Tokenomic of BITCHAIN

TOTAL SUPPLY
100,000,000,000,000 BITCHAIN

**Total

50,000,000,000,000 BITCHAIN

TOTAL BURNED
50,000,000,000,000 BITCHAIN

Tokenomic of BITCHAIN

- **100% Decentralization**

No team allocation at launch means that BITCHAIN is 100% community driven. Contract creators or dev must buy from Pancake swap just like how community buys.

- **Yield Generation Protocol**

Buyers and sellers pay a tax (4%), which is redistributed to holders. 2% is locked in liquidity and 2% is shared between all holders proportional to the amount of \$BITCHAIN held.

- **Deflationary Burn**

50% of the supply has been sent to the burn address. As this address also participates in the protocol, it accumulates more tokens, thereby effectively removing them from circulation.

- **Unruggable — 100% Safe**

LP tokens were burned thereby locking initial liquidity forever in pancake swap.

- **Autolocking Liquidity**

2% of each transaction is locked to liquidity forever. This contributes to less volatility and a continuously increasing price floor.

- **Fair Launch**

BITCHAIN has been stealth launched. Majority of BITCHAIN supply was seeded as liquidity.
